

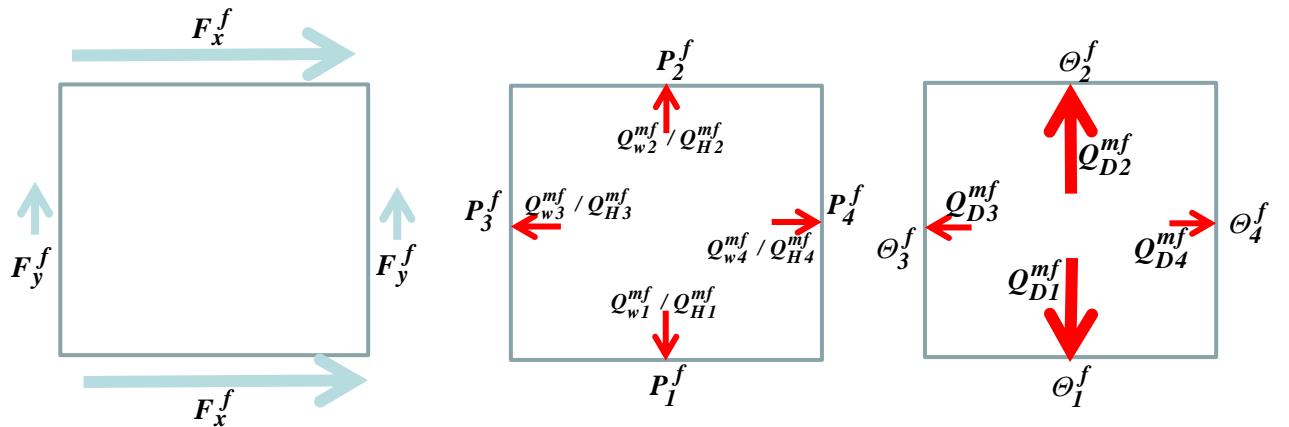

Fig. 1 Space discretization around the control-volume i (for a Cartesian grid)

a). Main flow in the x-direction:

$$F_x^f \gg F_y^f$$

b). Convective exchange:

$$\begin{aligned} P_I^f &\approx P_2^f \approx P_3^f \approx P_4^f \\ Q_{w1}^{mf} &\approx Q_{w2}^{mf} \approx Q_{w3}^{mf} \approx Q_{w4}^{mf} \\ Q_{H1}^{mf} &\approx Q_{H2}^{mf} \approx Q_{H3}^{mf} \approx Q_{H4}^{mf} \end{aligned}$$

$$Q_{D1}^{mf} \approx Q_{D2}^{mf} \approx Q_{D3}^{mf} \approx Q_{D4}^{mf}$$

c). Conductive exchange:

$$\begin{aligned} \Theta_I^f &\approx \Theta_2^f \ll \Theta_3^f \approx \Theta_4^f \\ Q_{D1}^{mf} &\approx Q_{D2}^{mf} \gg Q_{D3}^{mf} \approx Q_{D4}^{mf} \end{aligned}$$
